How many places
do you have to look
to answer one question?

Zphyre One builds the one place.

— SOFTWARE FOR COMPANIES THAT OUTGREW THEIR SPREADSHEETS

ZPHYRE INDUSTRIES (OPC) PRIVATE LIMITED
GURUGRAM · HARYANA · INDIA

Every company runs on a system.
Yours just isn't software yet.

It works. It employs people to keep it working.
And it can only be read by the person holding it.

FOUR QUESTIONS. TIME YOURSELF.

- 01 Who spoke to that customer last, and what did they say?
- 02 Is that job finished — or does someone *think* it is?
- 03 Where exactly is the order you promised for Friday?
- 04 What did the company actually do this month?

If any of those took more than one look — or one phone call — that is not a discipline problem. It is a systems problem, and it is the only thing we fix.

So we build the one place.

Not another app to add to the pile. One system that absorbs most of them, connects to the ones you keep, and speaks your company's own language.

ONE LOGIN

Everyone sees exactly what they are allowed to see. Nothing more.

YOUR WORDS

If your team says **job**, the system says **job**.

YOUR LOGO

White-labelled. It looks like your company, not like ours.

YOUR DATA

Yours to export, any time, including on the way out.

Start with one thing. Or start with everything.

We will tell you which, and we will tell you honestly — including when the answer is not yet.

A**ONE MODULE**

Fix the single thing that is costing you most. Customers, people, tasks, reporting or orders — pick one.

For when everything else is coping.

B**CUSTOM OS**

The whole company in one connected system — lead to delivery to invoice — designed around how you already work.

For when the pieces work but nothing connects.

C**INDUSTRY SOLUTION**

We have built your shape before. You inherit the research instead of paying for it, and it improves with every version.

For workflows that repeat across an industry.

No forced bundles. No package you have to grow into. The recommendation depends on the problem — which is why we ask before we quote.

Most software is a filing cabinet. This one taps you on the shoulder.

Storing information is the easy half. The half that changes a company is knowing who needs to do what next — and saying so, without being asked.

Nothing sits waiting to be noticed. The system notices.

We ask before we sell.

The first conversation is free, and the recommendation that follows is yours to keep — whether you hire us or not.

01

A CONVERSATION

You tell us how the business actually runs, where it gets stuck, and what you wish you could see without asking anybody.

02

A RECOMMENDATION

Proposed workflow, what to build, what to leave alone, what it will take and what it will cost. In writing.

03

YOUR DECISION

Proceed, defer, or take the thinking and do it yourself. All three are genuinely fine.

Understand first. Build second.

What's the biggest hiccup in your business?

Tell us. We'll show you what we would recommend.
